Karin,

I reviewed the report "Revegetation Monitoring Sites GVH 01 and GVH 05" for Centennial Mine. The reports look good and it appears all the plants are desirable species with good cover. As noted in the report, woody species density is lower on the pads than the reference areas and that is expected because of the time it takes to get shrubs and trees established.

In response to letter dated September 10, 2014 in which UEI requested confirmation that bond clock for GVH's #1 and #5 at year 5 (in 2014), we find the report adequate to document the bond clock starting in 2009 for GVH's 1 & 5. I have also added this information to the annual report for record keeping.

Thanks
