Kit,

Thanks for the clarification. Amanda Daniels indicated that, according to the MRP, there is a decant pipe on the pond that is right at the 100% sediment clean-out elevation. Does that pipe give any indication as to the sediment level?

Steve

Hi Steve,

The top of the bolt is the 60% cleanout level. The pond still had a considerable amount of mud and water in it and we couldn't access further out towards the center of the pond, or survey cross-sections, but as I stated in the last quarterly pond inspection report, based on eyeballing the sediment that is visible and averaging that amount over the pond surface, it does appear that the pond will most likely need cleaning sometime this fall.

Thanks,

Kit

Hi Kit,

Thanks for the update and getting the marker re-established. What are we looking at in the pictures? Is the top of the bolt the 60% clean-out level or is it the bottom of the painted section?

Steve

Gentlemen, as requested, the sediment cleanout marker was re-established at the Horizon Mine Sediment Pond today.

Please see the attached pictures.

Thanks,

Kit

Steve, that pipe is still under water, so until things dry out a bunch, we won't be able to see it, so we have to assume, since it's still under water, the sediment is not up to that level, at least at that part of the pond.

Thanks,

Kit
