Hi Keenan and Todd,

I will be gone on vacation all next week. I'll be back on September 4. You'll want NELCO to seed after they roughen and incorporate the straw. If that is before I'm back, here are some instructions.

The seed is in the receptionists office at the PFO.

The three large bags are the sagebrush grass mix. There is enough seed for 6 acres. The three bags hold 136 bulk pounds total: 2 bags of 50 lbs and 1 bag of 36 pounds. The seeder should walk off an acre and spread approximately 17 lbs PLS/acre or about 20 lbs of the bulk seed/acre. (1 acre will use slightly less than half of the fullest bags and 2/3 of the smaller bag. Or to put it another way...there should be 10 lbs left in each of the 50 lb sacks and 16 pounds in the small sack which will be spread over the 6th acre. )

The smaller bag (holding about 18 pounds) is for the 1 acre of riparian.

Even smaller bags hold seed that Todd and I will scatter in particular areas. These bags hold the sweet anise, bitterbrush, and oregon grape for the North facing or shaded areas.

The sedges and rushes are also packaged separately. Todd and I will seed those around the high water mark of Jewkes Creek.

I have attached the seed invoice for you to forward to our accounting folks. The sagebrush grass was priced by the acre. The riparian was priced by the pound. I am sending the seed tags separately.
