Re: Reclamation Plan, Topsoil Redistribution, North American Equities, Blazon #1 Mine, ACT/007/021, Folder No. 2, Carbon County, Utah

The reclamation design for Little Snyder Canyon, received August 23, 1988 has been reviewed. The plan calls for removing and placing the sod from the topsoil stockpile to the upper outcrops of the riprap lining Little Snyder. The plan also states that topsoil will not be redistributed in the Little Snyder Drainage due to a shortage in topsoil. However, the reclamation plan does not adequately define where the topsoil materials will be redistributed. In order for the plan to be considered technically adequate the following stipulation must be complied with.

Stipulation 817.24 - (1) - JSL

All existing stockpiled topsoil at the Blazon #1 Mine must be topdressed over the soil material that will cover the underground development waste.
