DIVISION OF
OIL, GAS & MINING

Mr. Donald Crane, Director
Reviion V
Office of Surface Mining
2nd Floor, Brooks Towers
1020 - 15th Street
Denver, Colorado 80202

Dear Mr. Crane:

Enclosed please find seven copies each of the Hydrology Study, Black Footed Ferret Survey, and upgraded vegetation data for Beaver Creek Coal Companies, C. V. Spur coal preparation loadout facility. These reports are being submitted to you based on John Hardaway's verbal comments as to the incompleteness of the August 8, 1980 submission of the C. V. Spur Mining and Reclamation Plan.

The hydrology report provides the summary of the ground and surface water characteristics present at C. V. Spur. The Black-Footed Ferret Study was conducted due to the small prairie dog town on the site and Utah Division of Oil, Gas, and Mining's requirement to address such areas as to the possible occurrence of Black-Footed Ferrets. The updated vegetation information contains data reduction for each of the quadrats and line transects, species diversity, sample adequacy, and reference area data. Please find that the page numbers reflect additions to the previous vegetation report submittal.

Sincerely,

Benjamin Costello /mal
