## Memorandum

To: Donald A. Crane  
From: Area Mining Supervisor, WRMA  
Subject: Arco-Beaver Creek Coal Company, C.V. Spur Coal  
Preparation and Loadout Facility

A copy of the new mining and reclamation plan relative to the subject was received in this office on August 25, 1980. The plans have been reviewed in our engineering department. The spur is principally for coal preparation and facilities for dumping and loading of the product. There are no mining facilities or mine plans, thus the operation will not conflict with 30 CFR 211 regulations or come under the administration of the Conservation Division.

There may be some coal seams at considerable depth in the underlying Ferron Sandstones, however a facility as proposed would probably be reclaimed before any mining would take place in any subeconomic reserves which may occur in this formation.
