Subject: Deficiencies For Savage Task 2613

Dan,

I still have the following deficiencies:

R645-301-121.200 The Permittee must update the characteristics of the disturbed drainage ditch (length, etc.) found on p. 7-77 in light of the realignment of said ditch.

R645-301-742.220 The Permittee must clearly demonstrate that the sedimentation pond can hold the water and sediment volume from the 10-year 24-hour storm, and the "emergency" plant discharge, providing adequate detention time to allow the effluent from the pond to meet Utah and Federal effluent limitations. (calculations for water and sediment volumes from design storm and calculations showing settling time for any sediment from the storm and the plant discharge seem to be missing).

R645-301-121.200, 301-733, 301-742.220, and 301-743, The Permittee must remove all information from the MRP pertaining to ponds no longer in existence, or include appropriate information for Ponds 2, 3, and 4 in the amendment.

If you have any questions, please let me know.

Thanks,
