RE: Installation of Two 12" Culverts from Pad Area Runoff, Wildcat Loadout, Andalex Resources, Inc., ACT/007/033-95B, Folder #3, Carbon County, Utah

Andalex Resources, Inc. has addressed and met the requirements of the R645 regulations and ACT/007/033-95B is therefore approved effective September 11, 1995.

FINDINGS DOCUMENT

1) The permittee has submitted all the necessary designs and calculations for installing two 12" inch culverts from the pad area to the disturb diversion ditch. The drainage ditch which accepts water flow from the pad area has been designed for this drainage area, and therefore does not need to be re-designed. The calculations and maps are P.E. certified as required in the R645 regulations.

2) Installing two additional culverts within the disturb area does not need to reviewed by any other agencies, since it does not change any existing environmental concerns.

3) The bonding amount will not need to be changed since there is a contingence to the bond greater than the costs of removing the two culverts.

4) This amendment will not have any impact on the hydrologic balance of this area.

5) The Technical Analysis document does not need to be updated with this amendment.

APPLICATION FOR PERMIT CHANGE

Title of Change:

STOCKPILE CULVERT INSTALLATION

Permit Number: ACT/007/033

Mine: Wildcat Loadout

Permittee: Andalex Resources, Inc.

Description, Include reason for change and timing required to implement: INSTALL 12" CMP TO CARRY RUN-OFF FROM THE COAL STOCKPILE PAD TO THE DRAINAGE DITCH BELOW. THIS WILL ELIMINATE EROSION PROBLEMS IN THESE LOCATIONS. TIME TO IMPLEMENT IS IMMEDIATELY.

☐ Yes	☒ No	1. Change in the size of the Permit Area? ____ acres ☐ increase ☐ decrease.
☐ Yes	☒ No	2. Change in the size of the Disturbed Area? ____ acres ☐ increase ☐ decrease.
☐ Yes	☒ No	3. Will permit change include operations outside the Cumulative Hydrologic Impact Area?
☐ Yes	☒ No	4. Will permit change include operations in hydrologic basins other than currently approved?
☐ Yes	☒ No	5. Does permit change result from incidental boundary movement of increase of insurance or reclamation bond?
☐ Yes	☒ No	6. Does the permit change require or include public notice/hearings?
☐ Yes	☒ No	7. Does the permit change qualify as Technical Revision, requiring Fast-track review?

Re: Proposed Pad Culverts
Wildcat Loadout

Dear Mr. Glasson:

Per your request, I have calculated the projected flows and proposed culvert sizing for the recently enlarged stockpile pad area. I have estimated the total pad area to be 8.0 acres, with approximately 1/2 (4.0 acres) draining to each of the proposed culverts at the Northeast and Southeast corners. I have also used a conservative estimate of 2% slope on the pad with a hydraulic length of 500'. The rainfall is 1.85 inches for a 10 year-24 hour precipitation event at the Wildcat Loadout. Based on these parameters, the total expected flow to each culvert is 3.81 cfs. The above calculations were performed using the OSM "Storm 6.0" Computer Program.

The expected flow was then routed through a circular channel using the Haestad "Flowmaster" Program, to determine the minimum acceptable culvert diameter. Culvert sizing and velocities were calculated using 25% (1v:4h) and 50% (1v:2h) slopes. Required culvert diameter is 0.72' with a 9.45 fps velocity for the 25% slope, and 0.63' with a 12.25 fps velocity for the 50% slope; therefore, a 12" diameter culvert is adequate to carry the expected flow from 1/2 of the pad area. Exit velocities will be erosive and should be controlled with rip-rap or culvert elbows.

Conclusion:

The expected flow from a 10 year-24 hour event from each 1/2 of the expanded stockpile pad area is 3.81 cfs. This flow can be carried by 12" cmp culverts located at the northeast and southeast corners of the pad. Larger culverts can be used if desired.

If you have any questions, or need any further information, please let me know.

Respectfully,

Dan W. Guy, P.E.
President
