Report summary and status for pending enforcement actions, permit conditions, Division Orders, and amendments:

The Permittee's water monitoring contractor notified the Division on April 18, 2008 that the surface water monitoring information for the first quarter of 2008 for the Wildcat Loadout permit area was in the electronic data base pipeline ready for uploading. The Division has uploaded the information. The Permittee continues to meet this Special Condition of Attachment "A" of the State permit issued by the DOGM.

3. Topsoil

The Permittee has redefined the containment berm on the west side of topsoil pile "E". The berm is a minimum of 2 feet high; this meets the requirement established within the mining and reclamation plan (Chapter 2, page 3).

4.b Hydrologic Balance: Sediment Ponds and Impoundments

Ponds A, B, D, E, and F were all observed to be dry. The Permittee has removed the rabbit brush from the open channel spillway at pond "F". The inlet ditch located on the SE corner of pond "C" has been repaired in order that it function as designed. A small amount of water was contained in pond "C".

4.d Hydrologic Balance: Water Monitoring

A review of the first quarter 2008 surface water monitoring information (DOGM water monitoring data base) for the Wildcat Loadout permit area revealed that none of the surface monitoring sites (WCW-1 through WCW-4) had any flow. None of the six permitted UPDES outfalls flowed.

7. Coal Mine Waste, Refuse Piles, Impoundments

The end dumped waste piles on the active lift of the waste rock disposal site should be spread and compacted. Noncoal waste material was not visible in the refuse. There was no evidence of burning within the pile.

20. Air Quality Permit

An application of water had recently been made on the primary road passing the truck scales en route to the office/bath house building. A power screen was observed on the main stockpile operations pad. It is not known if the Permittee has amended the air quality approval order to permit the use of this device.
