Subject: RE: Response to Wildcat DO-4

Jim...Plate 2 is the existing (currently approved and incorporated) old mylar hydro map. Plate 2A is the new Autocad hydro map, which is a cleaned-up version of the original (Plate 2) map, but also includes the changes that would go along with new construction associated with responding to DO-04. Assuming the DO amendment is approved, and the field changes proposed by the amendment are implemented, then the old mylar Plate 2 will be thrown away (at long last) and will be replaced with the new electronic version (Plate 2A before you now), which will then be renumbered as Plate 2. I know this is somewhat confusing, but it was done this way to ultimately avoid long-term confusion when the DO is taken care of and we finally have an as-built hydrology map on Autocad labeled Plate 2. Please call me if you need further clarification. Thanks

Dave

Dave,

I'll be completing the Initial Review for this submittal on Monday; I have one question before I can finish.

The Table of Contents lists Plates 2 and 2A, the C2 form says Plate 2 is to be replaced; the submittal contains Plate 2A. Is Plate 2A replacing Plate 2, or are both supposed to be in the MRP?

JIM
