Priscilla...We weighed one of the straw bales and it weighed right at 1000 pounds. We will distribute 17 of these bales over the 7.26 acre area as shown on the map, which should give an application rate of about 1.17 ton per acre.

Hi Cody -

We need to have the points noted in the attached drawing staked at Wildcat so that straw bales can be located at these points. Please let me know if you have any questions or problems with the file.

Thanks,

PJ Jensen
