They got started about 10 a.m. clearing a foot or 2 of drifted coal from PR5 in the location of S1 sample point (see Figure 1, App. P). A light drizzle kept the dust down and made the fines easier to move. The fines were measured at 10 inches deep in the vicinity of S1 which is at the north end of the "wind" fence on PR5. The fines are being taken up to the coal storage area for use as base.

By the end of the day they had cleared an area about 100 ft. x 25 ft. using a Bobcat and dozer (see attached image). They plan to use a tractor with a scraper on the rear tomorrow. They will not be working on the weekend.

Great! I hope they can get good weather to do the clean up. Thanks. Daron

I did an inspection at Wildcat today and Kit came to chat about the clean-up. He gave me his official 24 hour notice, as required in the NOV, that they will be trying to start clean-up work tomorrow. They'll be bringing in equipment and if the weather works for them tomorrow, they'll get started.
