1. Permits, Change, Transfer, Renewal, Sale

There are no permitting actions with the Division at this time.

2. Signs and Markers

The identification sign was inspected and it meets the requirements of the R645 Coal Rules. See Photo

3. Topsoil

The topsoil piles were snow covered. It is unlikely that wind or water erosion has occurred since the piles are well vegetated.

4.a Hydrologic Balance: Diversions

The diversions and culverts were open and functioning as designed. Sediment has started to fill within these structures. By next spring a major clean of ditches and diversions will be needed. Some diversions were recently cleaned. Many of the diversions are covered with weeds which causes the slowing down of the water and the depositing of sediment occurs.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

I inspected the sediment ponds throughout the property. They contained some water but were not discharging. It is unlikely these structures will discharge in the near future. The embankments appear to be stable. Inlets and outlets would function as designed. I did not see any hazardous conditions to these structures.

7. Coal Mine Waste, Refuse Piles, Impoundments

I inspected the refuse pile and it appears to be stable. I did not notice any hazardous conditions to the embankments. The diversions were functioning as designed. The refuse pile is inactive.

8. Noncoal Waste

The property was clear of non-coal waste materials such as oil, trash and grease cans.

10. Slides and Other Damage

No slides or other damage was noticed during the inspection. The Loadout appears to be stable.

15. Cessation of Operations

The loadout is considered in temporary cessation.

Permit Number: C0070033
Inspection Type: PARTIAL
Inspection Date: Thursday, March 22, 2018

16.b Roads: Drainage Controls

I inspected the road diversions and culverts throughout the property. They were functioning as designed. Some of the diversions have some sediment build-up within. Diversions will need cleaning out in the near future.
