Subject: Quarterly Sampling Report
Monitoring Period: October, November, December 1999
DOGM Permit Boundary Water Quality Monitoring Plan
Sunnyside Cogeneration Associates Power Plant

Dear Bill:

This letter summarizes the analytical results and field activities concerning the DOGM Permit Water Quality Monitoring Plan at the Sunnyside Cogeneration Associates Power Plant. The baseline quarterly period covered is Oct., Nov., Dec. 1999. I collected the quarterly water-samples, monthly field parameters, and performed visual inspections of the DOGM permit monitoring locations on December 07, 1999.

Immediately after collection, the water samples were preserved (when necessary), placed on ice in a cooler, and delivered under chain of custody documentation to Chemtech / Ford Laboratory.

The required field parameters for each monitoring location were measured on December 07, 1999, and are presented in Table 2. None of the DOGM UPDES permit outfalls discharged effluent during the monitoring period. Also, coarse refuse source (CRS) monitoring location was not discharging during this period; no sample was taken.

If you have any questions or comments, please contact me at (435) 888-4476.

Sincerely,

Rusty Netz
