Pete,

As per your request, I reviewed John Mercier's drilling reports and it appears that the following sites need one or more closure actions.

#### Emergency Holes

Dinosaur Canyon - need plugging along with the pad site and access road reclamation.

Eagle Canyon - need plugging along with the pad site and access road reclamation.

These sites are addressed in C/007/038-EX00K.

#### Exploration Holes

In Willow Creek Canyon between Dry Canyon and Mathis Canyon, Minor Coal Exploration, C/007/038-99F, File #2.

P-E14 and P-E15, holes have been cemented from bottom to top. Pad sites and access roads need reclaiming.

It is my opinion that the disturbance associated with P-E14 and P-E15 will be reclaimed this Fall. I also think that the emergency holes will be plugged and associated disturbances reclaimed this Fall.

As the fate of Willow Creek becomes clear, PMC will be better able to set its short and long term objectives.

If you need anything else, at any time, please do not hesitate to contact me.

Johnny
