Subject: Crandall Canyon Shaft

CC: "Pete Hess" <petehess@utah.gov>, "Pam Grubaugh-Littig" <pamgrubaughlitti...>
Due to the amount of moisture received in Crandall Canyon through the weekend and continuing today, the pumping of water from the shaft has been discontinued. The total volume of water pumped from the shaft to date is less than 400,000 gallons. Pumping will resume when things dry out a bit. I will keep you posted. I continue to work with Rain for Rent and Nielson Construction to determine the best way to remove the TSS from the water in the bottom portion of the shaft. I am open to any suggestions you may have.
