Report summary and status for pending enforcement actions, permit conditions, Division Orders, and amendments:

The permittee will survey the shaft area in November 2014. The shafts appear to be stable and no change since the last inspection.

The permittee will be requesting a bond release for most of the property next year. The 1 acre around the lower staff will not receive bond release.

All diversions held-up with the rainstorms in July and August.

2. Signs and Markers

I inspected identification signs at the gate to Crandall Canyon, the topsoil barrow area along highway US 50-6, and next to the road along Indian Canyon. The signs meet the minimum requirements of the R645 Coal Rules.

3. Topsoil

All available topsoil was used in reclamation. I did not see any signs of erosion to the topsoil. The soil appeared to be stable.

4.a Hydrologic Balance: Diversions

The diversions held up well from the recent rainstorms. Some of the road diversions will need some cleaning in the near future. Sediment has started to build-up within the culverts.

4.c Hydrologic Balance: Other Sediment Control Measures

The site is completely pock to control sediment flow. The pocks have held water within and prevent erosion. Vegetation is growing within the pocks including small trees.

8. Noncoal Waste

The reclaim site was clear of non-coal waste materials.

10. Slides and Other Damage

No slides or subsidence was noticed during the inspection.
