Angela,

The IR for this task is finished. I'm not sure what Priscilla is talking about with this conditional approval letter. I'm guessing that she's not doing a memo? Do you know what she's talking about? If you don't, let me know if you need clarification and I'll call Priscilla.

thanks,
steve

Steve (Team Lead),

This Task was received on 2/19/2008 and the IR letter is due on 2/29/2008.

I have reviewed the analyses that were provided for inclusion into the Refuse Volume Attachment 5-4. These analyses include soil samples from topsoil at degas well G-15 and at a staging area SP-1. The waste analyses indicates a potential for acid formation in a sample originating from the Savage wash plant, taken in December 2006. Each sample represents 5,000 tons of waste, according to the MRP sampling commitment.

I suggested in the Conditional approval letter that they request the lab re-calculate the acid forming potential based upon pyritic sulfur content only. This is a recommendation that will help them show lesser acid forming potential. It is not a requirement.

I have not written a memo on this task, all my comments are included in the conditional approval letter, attached. I am not certain who is copied on this conditional approval letter, and so I have highlighted the cc: list.

Please send this email to the internal file. I believe that the conditional approval letter could suffice for the IR response.
Thanks,
Priscilla.
