Report summary and status for pending enforcement actions, permit conditions, Division Orders, and amendments:

The Permittee's water monitoring contractor notified the Division on January 10, 2008 that the 4th quarter of 2007 surface and ground water monitoring information for the West Ridge Mine permit area was in the pipeline and same was acceptable for uploading. The Division assigned hydrologist uploaded this information into the water monitoring data base on March 11, 2008; the Permittee was notified that all all required sample sites and parameters had reportable data.

3. Topsoil

The topsoil pile located at the head of the right fork of "C" Canyon remains under snow pack.

4.a Hydrologic Balance: Diversions

The upper canyon storage pad remains under at least 18 inches of snow. Ditches in this area remain snow covered.

4.d Hydrologic Balance: Water Monitoring

The flow in "C" Canyon Creek was observed; the water appears to be of good quality. This flow volume is mostly Mine water which is being discharged. The inlet and channel above the undisturbed bypass culvert in the right-fork of "C" Canyon are still under snow; undisturbed flow was not visible or audible.

8. Noncoal Waste

The Permittee needs to police the disturbed area associated with the upper storage pad to remove and dispose of noncoal waste which is being exposed as the snow melts.
