Ladies, gentlemen....This is to let you know that the final cleanup of the channel below the mine was completed on Monday, August 24. This was done in accordance with the onsite inspection conducted by Ingrid Wieser (DOGM) and Jeff Studenka (DWQ) the week prior. There were 24 small individual areas which were identified and photographed prior to cleanup. These same areas were then photographed immediately after cleaning. Hard copies of the before/after photos will be mailed out to DOGM, DWQ and BLM in today's mail. (The electronic PDF copies are too large to send through email.) The pond at Catchment A was decanted yesterday, and is being cleaned out today. Based on visual observations this morning, it looks like it will take three truckloads of material to clean the pond. We will also change out the filter logs when we are done. I plan to drop a copy of the photos off to Steve Demzak at the PFO in the morning, and he has told me he will abate the DOGM violation 10033 at that time. I have asked Scamp Excavation to demobilize all equipment and material from the site, on the assumption that this task is now terminated. We appreciate everyone's constructive involvement in this cleanup process.
