Subject: West Ridge WQ Parameters

Hi Dana,

I'm going through the 2nd quarter water quality data for West Ridge and have a couple questions.

- 1). What's the flow value for stream site ST-10? Water quality data was submitted, but no flow value.
- 2). There isn't an entry for UPDES site 001. If it didn't discharge, just enter into the database that there was no flow for that quarter.
- 3). Where's the flow values for UPDES 002? Water quality data was submitted for 04/21/2010 and 06/17/2010 but no flow values for those two sampling events. There are two 002 samples in the pipeline of the database for what appears to be outfall 002, but they're not "ok'd" for uploading on your end.
- 4). UPDES 002 had a spike in total iron on the April 21st sampling event (1.504 ppm). With the compliance limit being 1.3, what did DWQ say about this?
- 5). Did you e-mail the UG-1 (pre-treatment sampling) for November? Hopefully you haven't yet because if you did, that means I can't find it. By the way, UG-1 is set up in the database for you to enter the data.

If you could get back to me with that information as soon as you can, that would be great . .or enter it into the database and I'll get it downloaded. Let me know if I can help in any way.

Thanks Dana,
Steve
