Carly,

Per our phone conversation, here's the link to the Division's water database:

<http://www.ogm.utah.gov/coal/edi/wqdb.htm>.

When you open the link, click on 'Query the Database'. You'll then see all the mines that we have data for. Scroll down to West Ridge and put a check in the box. Click 'SUBMIT MINES'. At that point, you will see all of the surface and ground water monitoring sites that we have data on. Stream sites ST-3 and ST-9 are the ones located on the Left Fork of Whitmore Cyn. If you check the box next to the site you're interested in and click 'HISTORY', the data should pop up in another screen. Let me know if you have any problems.

Additionally, I've attached the operational water monitoring map for the West Ridge Mine.

Let me know if there's anything else I can help with.

Regards,
Steve
