2. Signs and Markers

The Identification sign is located at the main gate to the property. The sign meets the minimum requirements of the R645 Coal Rules.

4.a Hydrologic Balance: Diversions

The diversions will need some cleaning due to the recent rainfalls for the past several days. The permittee has committed in cleaning the diversions out. The diversions are functioning as designed.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

The sediment pond upper and lower cell contained water. Most of the water was from the recent rainstorms. The sediment ponds were not discharging and are unlikely they will discharge.

4.d Hydrologic Balance: Water Monitoring

I inspected the water discharge by the main office. The water was clear coming out of the culvert.

8. Noncoal Waste

The mine site was clear of non-coal waste materials.

16.b Roads: Drainage Controls

The road diversions were functioning as design. Some minor maintenance will be needed due to sediment build up in some segments of the diversion.

18. Support Facilities, Utility Installations

There are no new support facilities since the last inspection.
