1. Permits, Change, Transfer, Renewal, Sale

The Division received an application for a permit amendment from the permittee on March 24, 2004. The title of the amendment is "Proposed Mining Alternatives". The amendment was assigned Task #1885 and is currently undergoing a review by Division Staff.

2. Signs and Markers

The mine ID sign is in place at the contact point of the permit area and the public access. The sign contained the required information.

4.d Hydrologic Balance: Water Monitoring

The only required water monitoring for this site is associated with discharges from UPDES outfalls. No discharge from any of the outfalls has occurred since permit issuance.

7. Coal Mine Waste, Refuse Piles, Impoundments

Mining Activities have now been moved back on top of the refuse pile as approved in the Mining and Reclamation Plan. The pile is graded to assure positive drainage to the culvert inlet.

A letter from MSHA dated January 28, 2004, states, "The referenced refuse pile identification number will be removed from the mine file. MSHA inspection and reporting requirements no longer apply to the referenced structure." Conversations with Bill Taylor, MSHA Castle Dale Field Office Manager, indicates that the MSHA ID No. 1211-UT-09-02334-01 has been abandoned by MSHA, but that the Mine ID No. 42-02334 is still assigned to the site since there is a surface mining permit (C/007/042) from the Utah Division of Oil, Gas and Mining. The inspection frequency currently set for the surface mining operation at Star Point Waste Fuel by MSHA is once every six months. MSHA also indicated that all surface mining regulations still apply to the mine site.
