2. Signs and Markers

Mine identification sign is located along side of the county road used for access into the permit area. The sign contains the required information.

4.c Hydrologic Balance: Other Sediment Control Measures

The sediment treatment basin locate on the back side of the refuse pile has a by pass hole under the culvert used for discharge. This hole transcends through the embankment directly under the culvert. Problems also exist on the culvert that is placed under the road and allows water to enter this same sediment basin. Water has under cut this culvert as well. Maintenance need to be done on both culvert to repair the damage.

The majority of the sediment basins located on the mine site need to be cleaned out as they are at capacity.

7. Coal Mine Waste, Refuse Piles, Impoundments

The refuse pile is being mined in horizontal lifts. The pile appeared stable. Drainage from the surface of the pile is directed to the designed culvert at the south east end.
