Subject: New info. for headwater's (Covol)

Headwater is or will be receiving refuse material from Savage (DOGM permitted site) to clean the refuse material. All material is suppose to come back to Savage. This can help our case to permit the Headwater. Pete is the inspector of Savage. He should get tonnage shipped from Savage to Headwaters.

In my opinion we prematurely approved this to happen but it is good that it did. My understanding is refuse material can only go from one permitted site to anther permitted site.
