I spoke with operations and received an update on the processing of the Consol waste coal pile. All of the material in the waste coal pile has been processed. The over-sized material that was removed by the screen at their site was returned to the location of the old waste coal pile, laid down in 2 foot lifts, and compacted as required by Consol's permit. Our equipment has been removed from the site. All of the fines that were produced by the screening operation have been shipped and delivered to the power plants. The coarse material from the screening operation was hauled to our Wellington plant. We have approximately 5,000 tons left to process out of the 7,500 tons that were delivered.

Since our operation at Consol's mine has been completed, this will be the final update for this project. If you have any questions, please let me know.

Thank you,
Gina
