2. Signs and Markers

The identification sign was inspected and it meets the requirements of the R645 Coal Rules. See Photo

3. Topsoil

I inspected the topsoil piles and I did not see any signs of wind or water erosion. The topsoil piles appear to be stable and protected by a berm. See Photo

4.a Hydrologic Balance: Diversions

The diversions and culverts were open and functioning as designed. Sediment has started to fill within these structures. It is likely by the end of the winter months, the diversions will need to be cleaned out in the spring.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

I inspected the sediment ponds throughout the property. They contained some water but were not discharging. It is unlikely these structures will discharge in the near future. The embankments appear to be stable. Inlets and outlets would function as designed. I did not see any hazardous conditions to these structures.

8. Noncoal Waste

The property was clear of non-coal waste materials such as oil, trash and grease cans.

16.a Roads: Construction, Maintenance, Surfacing

The roads were compacted with no dust control problem. They were wet and muddy from the melting snow.

16.b Roads: Drainage Controls

Road diversions and culverts were open and functioning as designed. These structures will need the annual spring cleaning from winter runoff.

18. Support Facilities, Utility Installations

No new facilities constructed since the last inspection.
