Greg,

Thanks for the update. I'm glad that things are progressing along for you. I'm sure you'll be relieved to get it off your plate and onto ours come September.

Thanks again,
Steve

Hi Steve, April, Daron;

Thought you might enjoy a look at the recent monitor well installations for the Kinney#2 Mine.

The photos may need some explanation:

For CR-10-11 the 2" screen with 2" blank and the Xover-sub to 4" fiberglass, also the screen being lowered in the hole, and a view of the hole cap with the pumping tube then last water ~2gpm.

For CR-10-12 you first see the cap, then the Grunfos pump being lowered in the hole then pumping ~ 18 gpm.

If you notice in the background you can see the rig in the field west of the highway with mast up on CR-10-11. (We drilled 12 first)

After extensive pumping, 20 plus hours for 12 and ~ 12 hours for 11 we sampled and sent samples to lab.

The completion diagrams are final but will be re-submitted with the permit application on Sept.1, without the photos.

Still plugging along; Ben and I have made some real progress.

Daron will call you for more of an update.

Later,

Greg
