**INSPECTION REPORT**

(continuation sheet)

Page 2 of 2

PERMIT NUMBER: ACT/015/002

DATE OF INSPECTION: 1/10/91

(Comments are Numbered to Correspond with Topics Listed Above)

On the day of inspection there was approximately two inches of snow on the ground. Cattle were on the range in the area surrounding the mine site, however no cattle had gotten into the reclaimed fenced area.

1. The permittee has been notified that no more work will be allowed on site without setting back the bond clock. Temporary disturbed area boundary markers were placed by the permittee which vary from the original boundary markers, the Division does not agree with the new placement of the markers. The permittee has requested a meeting during the week of January 21, 1991 to discuss these matters with the Division.

All bonding and insurance were in order.

2. Signs and markers were in place. As noted above the permittee is requesting a change in the disturbed area markers.

4e. No surface or groundwater monitoring is required. If the sediment pond discharges then monitoring will be required.

9. Wildlife are utilizing the site. Tracts in the snow and field observations indicated song birds, rabbits, rodents, and a coyote were on site.

12. Two portal entries are beginning to settle revealing a small opening in the entry. This settling is currently minor, however the entries should be monitored. The portal which is closest to the top of the refuse pile appears to have settled more.

14. The subsidence cracks were checked and no settling has occurred.
