PERMIT NUMBER: ACT/015/007 DATE OF INSPECTION: 12/29/93

(Comments are Numbered to Correspond with Topics Listed Above)

### 12. Backfilling And Grading

The reclaimed road from the point where the pavements ends to the first water bar has been driven on by vehicles to the point where a well worn road now exists. As referred to in the last inspection report, the permit states (page 24-a) that barriers and roughned condition will prevent vehicle access. The condition of the reclaimed road is not in compliance with the permit and must be corrected. At the last inspection it was requested that the vehicle access be eliminated by a fence or other barrier immediately and in the fall 1994 the two tracks be ripped and reseeded. No action was taken at the time of my inspection but the issue was discussed between Karla Knopp and myself. The operator must provide a written commitment that this will be corrected. I informed her that she must contact Susan White to discuss any plans to prevent access and that something should be decided and implemented prior to the next inspection.

13.Revegetation- Karla Knopp and a contract biologist working for J.B.R. consultants were measuring the reference area to determine satistical adequacy. No assessment of the vegetation was made during this inspection as Susan White had made the statement that the site was in noncompliance with the performance standards as required by R645-301-350 in her December 12,1993 inspection report. This statement stills stands until the operator's data collection is completed and reviewed.
