## ATTACHMENT A

### Special Conditions

1. Before extending entries to the west beyond the location of hole TMX-6, the operator must drill horizontal holes to determine if significant water could be encountered in the Starpoint/Blackhawk aquifer. If significant water is encountered in the horizontal holes, the operator must stop the advance and notify the Regulatory Authority.
2. Before mining in the vicinity of perennial stream and escarpment buffer zones, the operator must provide data sufficient to justify use of the 15 degree angle-of-draw (measured from the vertical). If the technical data show that an angle-of-draw greater than 15 degrees is expected, the buffer zone must be modified to be consistent with the expected angle-of-draw.
3. The operator shall limit mining operations in the last panel on the eastern boundary of Section 1, T18S, R6E to first mining only in order to leave pillars of sufficient size to prevent caving of the overlying strata.
