RE: Notice of Intention to Continue Mining Operations, Emery Deep Mine

Dear Mr. Feight:

In accordance with Section 26, Rule M3 of the Mined Reclamation Act, enclosed for your review is a summary of our operations for 1978. I realize this report is most tardy, however there was confusion on our part since we do not mine federal coal. The confusion is now cleared and the 1979 report will be sent to you in a timely fashion.

In 1978, the Emery Deep Mine recovered 414,212 tons of coal in 48.82 acres. Coal ownership was 100% Consol-Kemmerer; surface ownership was as follows:

Cedar Ridge	9.44 acres
John Lewis III	13.48 acres
Consol-Kemmerer	<u>25.90 acres</u>
Total	48.82 acres

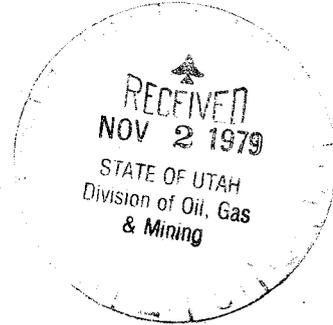

Since Consol practices only a partial pillar recovery system, there has been no noticeable subsidence or damage to the surface.

Consol has recently done some exploration drilling in the mine area, and we have encountered water in almost every hole. However, unless the water is artesian, it is difficult to determine the exact zone of occurrence and the amount produced. Of the holes shown on the mine map, the following holes gave artesian flow:

- FC 447A
- FC 500
- FC 504
- FC 505
- FC 511

The estimated water flow in these holes is from 10-40 gpm. Water information on holes drilled prior to 1978 is lacking since our main concern is the coal resource. We are presently drilling water monitoring wells in order to better define the aquifers.
