Re: Subsidence Control:
Public Notification

DIVISION OF
OIL, GAS & MINING

Dear Mr. Jensen:

You are hereby notified that, pursuant to Section 817.122 of the Utah Coal Mining Regulations pertaining to surface effects of underground coal mining activities, Consolidation Coal Company's (Consol) Emery Deep Mine is presently operating in Emery County, Utah, and will, not less than six months from the date of this notice, conduct underground mining activities beneath or adjacent to your property and/or residence located in said county.

The attached map identifies the present specific areas and quarterly mining dates in which mining operations will take place with respect to your property. However, due to unforeseeable delays or advances in mining, the quarterly mining dates or specific mining areas could be changed.

Consol has adopted measures consistent with known technology in order to prevent subsidence from causing material damage. If necessary, Consol will implement subsidence mitigation as required by Chapter 12, Section 4.3.2 of Consol's permit application filed with the State of Utah, Division of Oil, Gas, and Mining.

Should you have any questions concerning the above matter, please contact Ron Thompson, Mine Engineer at 801-286-2301.

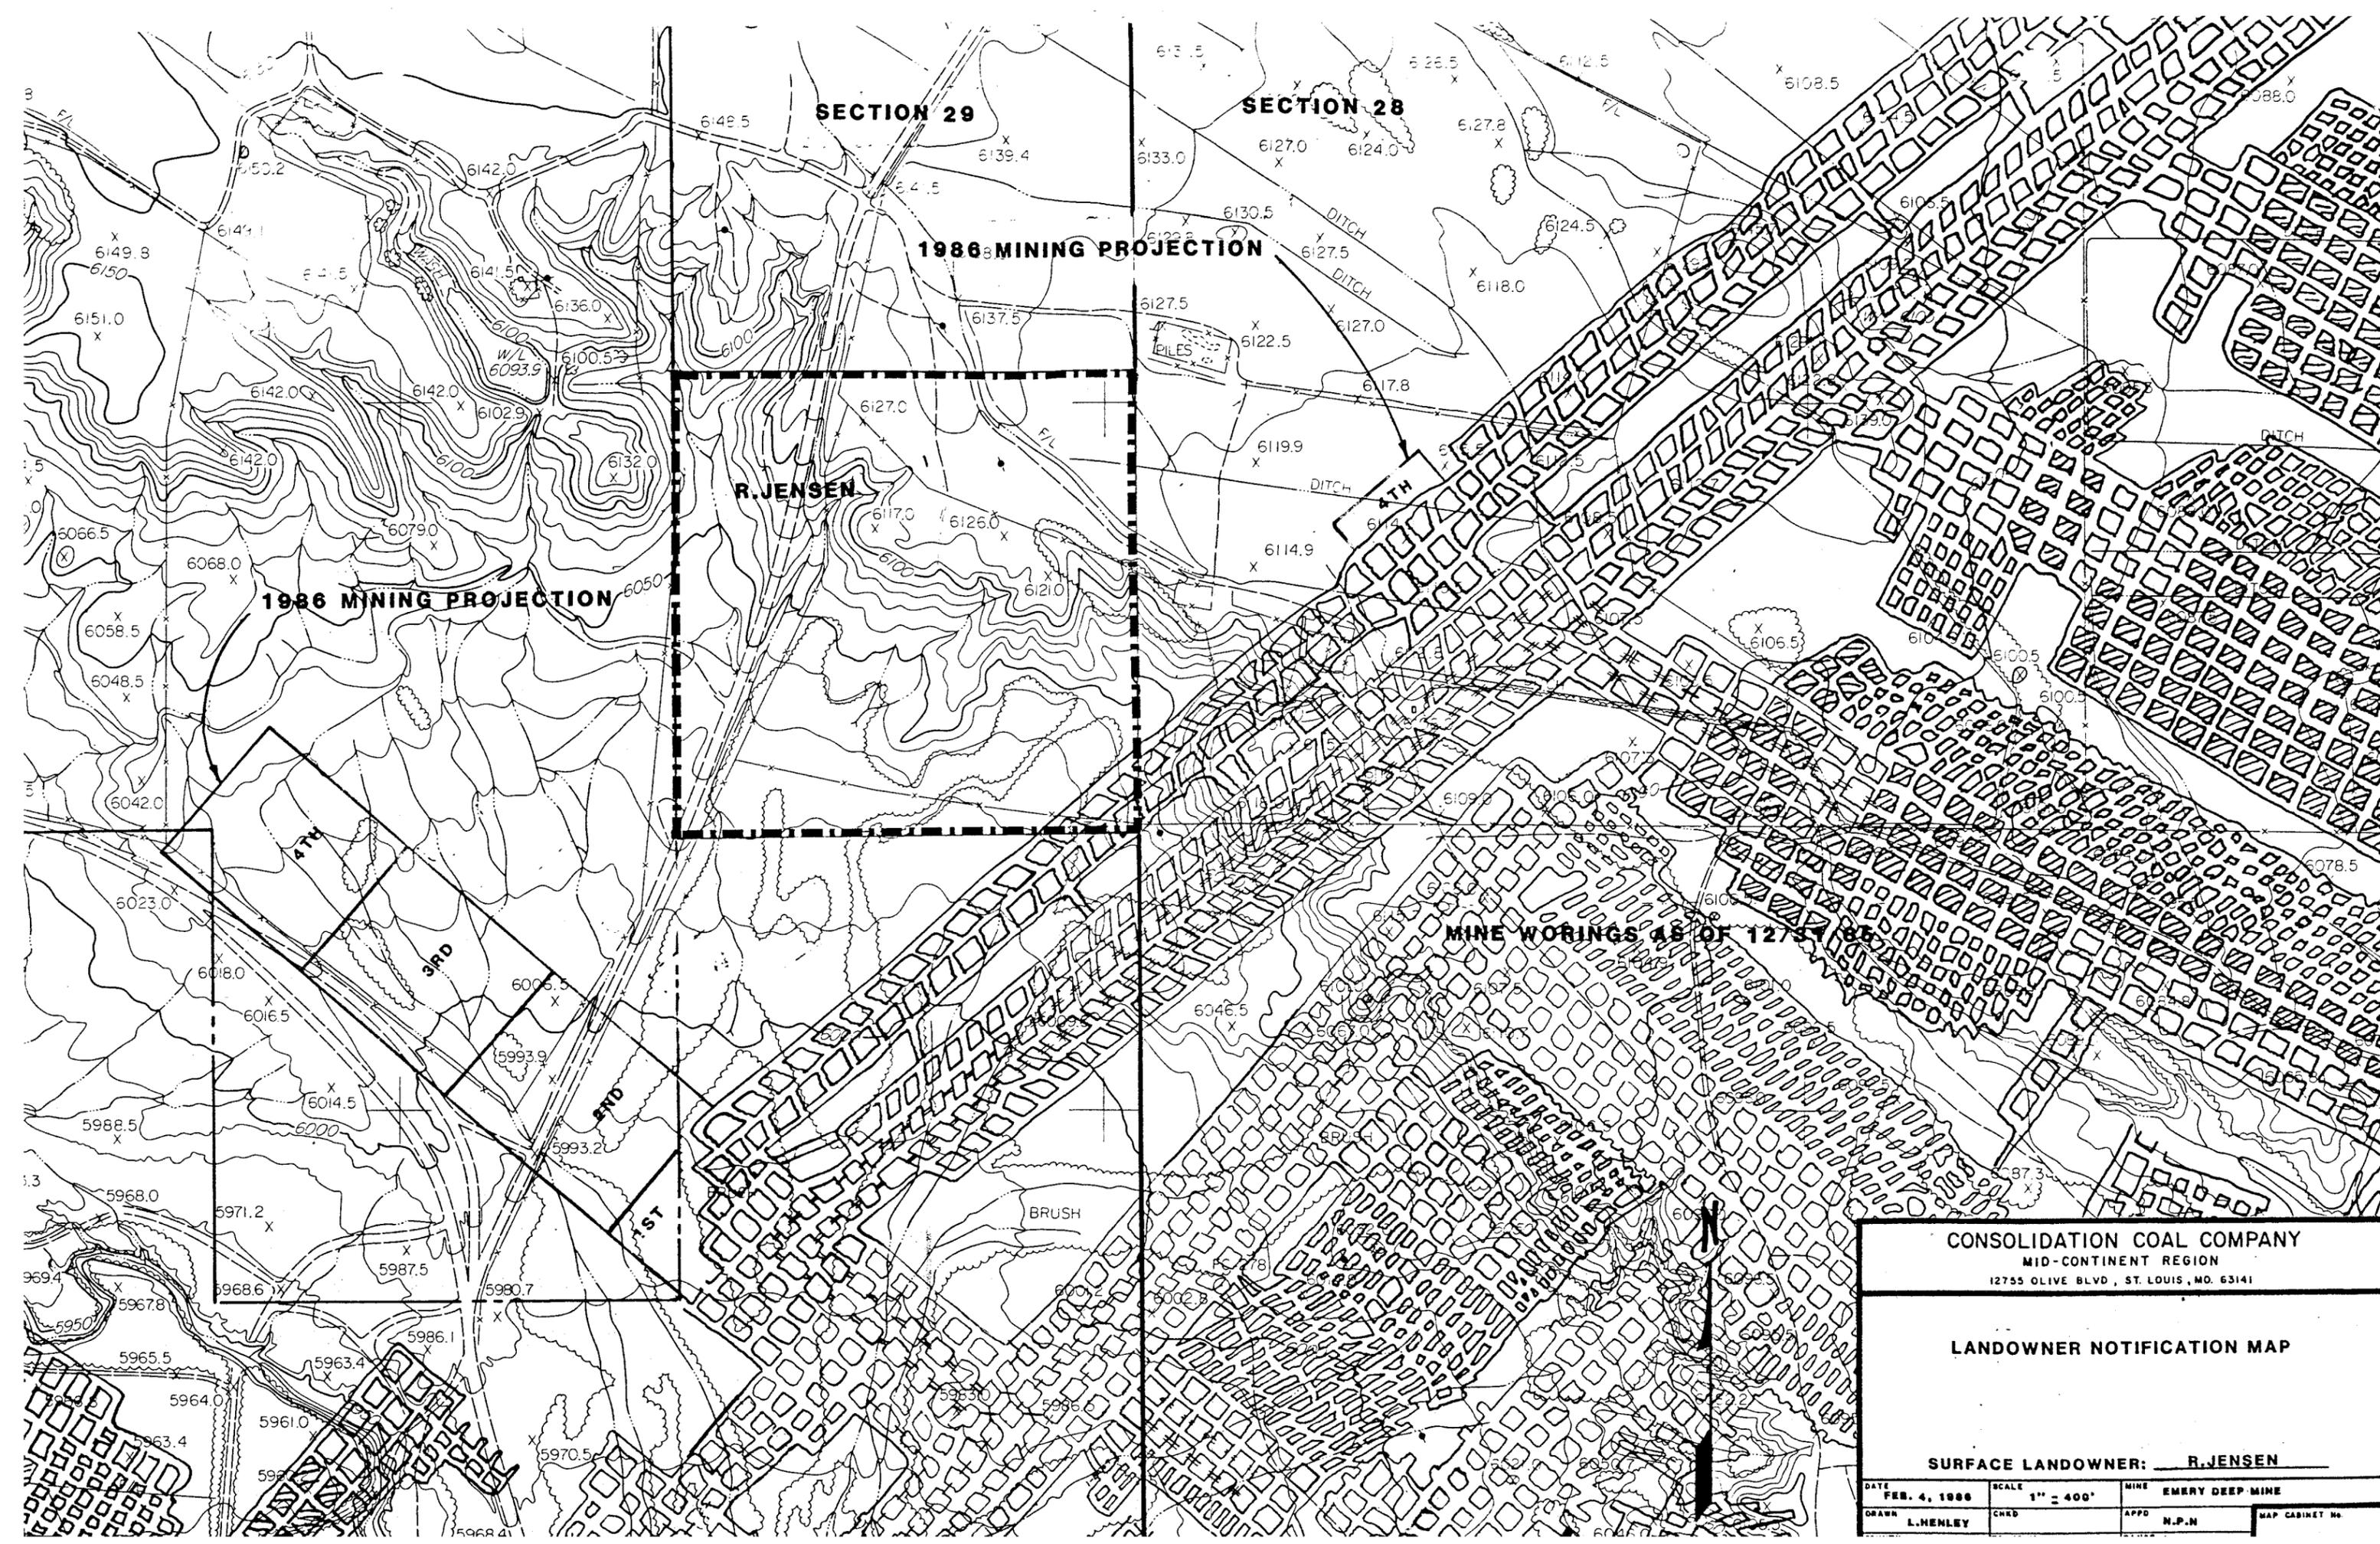

Sincerely,

Nicolaus P. Neumann
Group Leader - Permits
