RE: Reclamation Plan for Areas Impacted by Mine Fire Control Activities, Emery Deep Mine, ACT/015/015, Folder No. 3, Emery County, Utah

The revegetation plan has been reviewed for the referenced disturbance and is adequate except for the seeding rate. The rate associated with seed plan A and B is for Drill seeding. This rate should be doubled for broadcast seeding and the areas seeded should be lightly raked to aid in covering the seed. Therefore, with the following condition, this plan is acceptable.

Condition 817.111-1-LK

The operator will double the seeding rate for seed plans A and B as stated in the November 11, 1983, response letter. After seeding, the areas will be raked by hand to aid in covering the seed.
