Re: Mine Sequence Change at the Emery Deep Mine, Consolidation Coal Company, ACT/015/015, Emery County, Utah, File #2.

Consolidation Coal Company proposes to revise the Emery Deep Mine permit by adding another mining pannel as shown in their submittal map, Plate 3-7. The area to be incorporated is approximately 5.5 acres. This constitutes an "incidental boundary change" whereby the addition does not result in more than 15% or 10 acres change (whichever is smaller) to the permit over the five-year permit term (UMC 700.5).

The pannel area is not outside the cumulative impact area and does not engage in operations in hydrologic basins other than those originally approved.

The addition of this area will be recognized and recorded as an incidental boundry change, and the information submitted will be incorporated in the mine plan.
