INSPECTION REPORT COMMENTS  
(continuation sheet)

Page 2 of 3

Permit No. ACT/015/015 Inspection Date March 27, 1992

(Comments are Numbered to Correspond with Topics Listed Above)

1. Permits -

- a. Insurance appears to be complying with state regulations. Enclosed is a copy of the accord form.
- b. Refuse pile was inspected on February 27, 1992, and certified on March 4, 1992. I.D. # 1211-UT-09-0079-01.
- c. Sediment ponds were inspected February 27, 1992 and seepage was occurring at pond #6. The inspection of pond #6 shows small amounts of water flowing with no potential damage to life.
- d. NPDES - Pond #1 occasionally has extremely high oil and grease levels. The operator believes the process of measuring oil and grease also considers sulfides as oil and grease. Therefore, Consolidation Coal Company will analyze for sulfides to find correlation to high oil and grease levels. No ponds were discharging during inspection.
- e. Reviewed the water monitoring data for 4th quarter and checked parameters taken with the required parameters of the permit. All required parameters were analyzed.

3. Topsoil -

The topsoil and subsoil piles located by pond #6 have a history of sparse or no vegetation growing on them. The piles were mulched and reseeded in the Fall of 1991. The inspection of the piles revealed single stem plants springing up throughout the topsoil piles. The disturbing factor is that cows have been roaming on to the piles. Therefore, further investigation into the regulations is needed to prevent these occurrences. Those piles should be protected from contaminants and unnecessary competition that would interfere with revegetation.

Permit No. ACT/015/015 Inspection Date March 27, 1992

(Comments are Numbered to Correspond with Topics Listed Above)

7. Coal Processing Waste -

The refuse pile is small in size and irregular on the top. It was requested to slope the top of the pile to remove potential rainfall from the pile.

19. AVS Check -

An AVS check was made without any new changes.
