The following notice of intent to construct, submitted in accordance with Section R307-401-1, Utah Air Quality Rules, has been received for consideration by the Executive Secretary, Utah Air Quality Board:

**THIS COMMUNICATION IS AN ATTEMPT TO COLLECT A INFORMATION OBTAINED WILL BE USED FOR THAT PURPOSE**  
Published in the Sun Advocate June 13, 20 and 27, 2

Consolidated Coal Company  
P.O. Box 527  
Emery, UT 84522

Location: Four miles south of Emery on Consol Road, Emery County

**Project Description:** Consolidated Coal Company, operating in Emery County, has proposed to modify its existing Approval Order DAQE-177-95 to add a series of conveyors, a crusher, screen, two stockpiles and a truck load-out. The existing tipple will not be removed. Two Boser automatic samplers (pre 1969 equipments) and a stacking conveyor will be removed from the current operation. The company also proposes to increase potential throughput capacity from 979,200 to 1,300,000 tons of coal per year. Air emission producing equipments consists of coal processing/handling equipment. Most of the equipments at this site is considered grand fathered, as they were installed and operating prior to 1969. Emission sources added after 1969 are subject to Notice of Intent and Approval Order requirements.

Consolidated Coal Company, based in St. Louis, Missouri, owns an underground coalmine approximately four (4) miles south of Emery, Utah.

It has been determined that the conditions of the Utah Administrative Code R307-401-6 and the Federal rules have been met. The Executive Secretary intends to issue an Approval Order after a 30-day public comment period is held. This comment period is being held to receive and evaluate public input on the project proposed by Consolidation Coal Company.

The Proposed Emissions increase will be:

PM <sub>10</sub>	0.99 tons/year
S02	0.13 tons/year
NOx	1.98 tons/year
CO	0.45 tons/year
VOC	0.04 tons/year

The completed engineering evaluation and air quality impact analysis showed that no new violations of National Ambient Air Quality Standards or Prevention of Significant Deterioration Increments will occur. It is the intent of the Executive Secretary to approve the construction project.

The construction proposal and estimate of the effect on local air quality are available for public inspection and comment at the Utah Division of Air Quality, Department of Environmental Quality, 150 North 1950 West, Salt Lake City, Utah 84114-4820. There will be a 30-day comment period held. **Written comments received by the Division, at the same address on or before July 20, 2002, will be considered in making the final decision on the approval/disapproval of the proposed construction.**

If anyone so requests to the Executive Secretary at the Division in writing, within 15 days of publication of the Notice, a hearing will be held to explain the project and technical rationale for the proposed action. The hearing will be scheduled as close as practicable to the proposed project location. Comments obtained during the hearing will be evaluated and considered by the Executive Secretary before making a final decision on the approval/disapproval of the project.

**Putting a New Face on Fire**

The face of America's older population has changed from years past. Many older adults of today are volunteering, traveling, starting second careers, and surfing the Web. As the priorities of America's older generation change, so should their fire safety practices. According to the United States Fire Administration (USFA), the fire death rate among people over the age of 65 is twice as high as the national average. In addition, the fire death rate among people between ages 75 and 85 is three times the national average and after age 85, it increases to four times the national average. These statistics are especially alarming when researchers estimate that by 2030, the 65 and older population will exceed 70 million people. Adults 65 years and older can reduce their fire death rate by changing five major fire safety habits:

**Change Smoke Alarm Batteries**

Having a working smoke alarm can more than double your chances of surviving a fire.

Make sure alarms are installed on each level of your home and outside all sleeping areas. If sleeping with bedroom doors closed, the smoke alarms should be installed within each room. Test each alarm monthly and replace the battery at least once a year. Adults who are deaf or hard of hearing should invest in visual aids such as alarms with strobe lights. Flashing or vibrating smoke alarms should also be tested every month.

**Change or Update Escape Routes**

Many older adults are still using escape routes that were planned when the kids were in the house. Plan and practice your home fire escape. Consider your capabilities when preparing es-

cape routes. Ha
