Subject: Re: Coal Fines

Good morning, Seth. I was just talking to Tim about the progress of handling the coal fines. He thought that the water sprays are hooked up and are operable. Is that correct?

Is the extended fence up?

I also understand that you are looking into an extendable chute for the drop chute. Would you please update me on this? When would this be installed? How did Steve's idea about spraying with the solution from Pierce Oil work out? and his idea of the large tarp-like structure with supports (the California coal solution).

Please update me on all of these items. If you have any other actions that you are taking to handle the coal fines, please let me know. If you would like to discuss anything, please call me at 801-538-5268.

Thank you. Pam

Dear Mrs. Grubaugh-Littig,

Please be advised that the 2002, 4th Quarter Water Samples for Consolidation Coal Co.'s Emery Mine have been submitted and should be in the pipeline.

If have any questions or concerns please call me at (435) 286-3512.

Sincerely,
Seth McCourt
Mine Engineer
Emery Mine
