Subject: Emery Maps Task 2334

Hello John,
Our Plate update review found the following deficiencies with the maps:

Plate V-2
Needs to show new road in Legend.

Plate V1-10

Map is too small and does not provide detail. Plate needs to show contour lines, relationship of disturbed area to streams, surface drainage, and routing paths (include in Legend), disturbed areas and more detail on structures. Some of the undisturbed area can be omitted and the Plate can depict frames showing the disturbed areas.

Joe Helfrich needs to ground truth the vegetation with respect to Plate V-4. The updated version has been incorporated for now.
