Hello,

I have one quick thing to report to you guys. Dana's been swamped with Board related work as of late but I did manage to get some clarification on the delineation of the 'hydrologic evaluation line'.

The hydrologic line should be based on science and supporting data from the PHC. If you can show that the hydrologic boundary line that you drew is based upon the data/information presented in the PHC, we're good. Joe's Valley is a no-brainer for the western portion of the area, but be mindful that the whole area needs to be addressed.

Dana's out for the rest of the day with the Board, but will be in tomorrow morning. I'll try to track her down and talk about the final language for the hydrologic resource line and get back to you as soon as I can.

Give me a call with any questions you might have,
Steve
