Subject: Emery Deep: Zero Zero North Panel Addition (Task ID#3339)
Place: OGMCOAL

John,

As we discussed earlier, here is as comprehensive a list as I can generate at this point relative to the information that will need to be included at the clean copy stage of this permitting action:

- 1) Provide the commitment language Ingrid Wieser requested as to how you will contact the Division if threatened, endangered or sensitive species are found etc. (Page 2 of Patrick Collins Zero Zero North report).
- 2) For the sake consistency in how the information is presented in the pre-subsidence information, please depict the Zero Zero North Panel on Figure 1 of Appendix V-5.
- 3) Revise all affected maps/plates/figures in the application that depict the "adjacent area boundary revision". The clean copies should revise this area so as to be black instead of green and be a part of the larger adjacent area.
- 4) Provide the modifications that are forthcoming regarding the PHC: a. The scientific justification for the hydrologic evaluation area delineation and b. Any text revisions to the PHC that are triggered by the use of the term 'adjacent area'.

At this point, that's all I got. If something else comes up, I'll let you and Richard know ASAP. Conversely, if you think of something I've missed, let me know.

Thanks,
Steve
