Priscilla

I spoke with Karla Knoop (JBR) this morning after you called.

Karla informed me that the additional stake was not placed this year (2009). She will place an additional stake during the 2010 season. Regarding the coal dust and color monitoring, I think we need to review this in the field in 2010. I have asked Karla to invite DOGM this spring when she samples the site. I think that the color change that Karla is observing is being caused by the coal dust being broken down and/or eroding. This color change to brown infers that no additional coal dust is being added. The intent of the program is to verify this and I think we should keep collecting data by the same method. We can discuss this in the field next year.
