Good morning,

I just went through the 2nd quarter data and have some comments:

I. Springs:

-The following parameters are not required for springs: T-Iron, T-Manganese, Lab pH, Hydroxide, Lab Spec. Conductivity, Acidity and Total Alkalinity.

-Springs SP-10, SP-11: These spring sites had a "depth" entered. I'm not sure what happened here. Please address.

II. Streams:

-The following parameters are not required for stream monitoring sites: Dissolved-Iron, Dissolved Magnesium, Dissolved Manganese, Dissolved Potassium, Dissolved Sodium, Sulfate and Total Alkalinity.

III. Wells:

- Plan calls for water levels (i.e. ground water elevation), not depth. In the future, please enter the water levels not depth.

- Water quality data was not submitted for well RDA-6. Please address.

- Well ZZ-L is not required by the plan.

Let me know about the missing data (RDA-6) and the "depth" data entered for the springs.

Thanks,
Steve
