Hi Mike,

I'm getting caught up on some water quality reports and I came across some elevated total iron concentrations at UPDES Outfall 003.

Three times during the 2nd quarter of 2013, total iron was exceeded:

April 16th, 2013- 1.51 ppm

May 9th, 2013- 1.62 ppm

May 16th, 2013- 1.61 ppm.

Total iron was exceeded again on August 1st, 2013 (2.29 ppm).

At any rate, you may already be aware of these values. I know that they've been attempting to raise the level of the pump at this outfall (003) in order to minimize the amount of suspended material at the bottom of the well/mine. Let me know what you're thinking when you get a chance.

Regards,

Steve
