Russel,

I just wanted to update you on the status of the additional information that Priscilla requested related to the soil sampling that Jamey did at the Emery Mine late last month. The lab has reissued their report to include the cation concentrations that comprise the SAR. I have double-checked all of their calculations and they are correct, so the SAR data reported in the original submittal are also all correct. We are still preparing a sample location map. Once that is done, I will package Jamey's field notes, the chain-of-custody, the lab report (which includes the cation data), and a sample location map, along with a cover letter, and send it to you. Hopefully this will be done in the next couple of days.

I hope this timing works for you, but let me know if you need anything else.

Regards,

Karla Knoop
