RE: Municipal Sewer Sludge Sampling

Dear Mr. Davis,

As per your request; here is a submittal of information dealing with the sludge solids tested from the Price River Water Improvement District's Wastewater Treatment Facility, its sampling procedure, testing protocol, and results.

The sludge tested was previously digested, stabilized, and dried at our facility. The sample was collected on March 16, 1992 by Operator Brian Harris at five different points on a sludge pile of approximately 1500 cubic yards. The sample was then shipped via United Parcel Service to Ford Analytical Laboratories in Salt Lake City, Utah. Records indicate that the sample was received on March 17, 1992 and analysis was begun at 4:00 p.m. on that same day. The Laboratory tested using the Toxic Control Leach Program (TCLP) procedure as approved by the U.S. Environmental Protection Agency.

Enclosed is a listing of the metals detected and their values.

If there are any further questions, please contact us.

Sincerely,

Jeffrey R. Richens, Superintendent
P.R.W.I.D. Wastewater Treatment Plant
