**2. Signs and Markers**

Identification sign is on the trail to the mine site.

**3. Topsoil**

All topsoil was used in reclamation.

**4.a Hydrologic Balance: Diversions**

The mine site received a intense rain storm. There were a few areas where erosion is starting to occur. Water bars which failed cause the water to travel over the outslope. The permittee has fixed these areas by re-building water bars, diversions and berms.

**4.c Hydrologic Balance: Other Sediment Control Measures**

The site is pocked to prevent sediment from leaving the site and stores water for plant growth.

**8. Noncoal Waste**

The site is clear of non-coal waste material.

**10. Slides and Other Damage**

No slides or other damage was noticed during the inspection.
