Dear District  
San Rafael Resource Area  
900 North 700 East  
Price, Utah 84501

FEB 12 1988

Mr. Jim Hixson  
Chief Mining Engineer  
Utah Power & Light Co.  
Mining Division  
P. O. Box 310  
Huntington, Utah 84328

Dear Mr. Hixson:

The proposed modification of the addition of a permanent water sump to the 11th Right section of the Dear Creek mine between crosscuts 3 and 4 was approved verbally in January when the mining of the sump was started. This modification is necessary and adequate due to the extensive water in this area, the possibility of using this sump as a permanent water supply and because it is located in a barrier of coal that will not be mined. This modification is logical and is approved as proposed.

Sincerely yours,

/S/ JAMES W. DRYDEN

Area Manager

Dear Mr. Ward:

At your request, this transmittal is to provide additional information in regards to Jim Hislop's letter to you on February 5, 1988.

Enclosed is a 100 scale drawing showing a water sump that was developed into the barrier pillar at cross-cuts three and four in the Eleventh Right section of the Deer Creek Mine.

This sump was required for a collection point for dewatering the general surrounding area.

We would appreciate your approval of this minor modification to the Deer Creek Mine plan.

Sincerely,

Ray Christensen  
Manager  
Permitting and Compliance
