INCOMING
C/015/018

John Blake
Mineral Resource Specialist
School & Institutional Trust Lands Administration
675 East 500 South
Suite 500
Salt Lake City, UT 84102

Dear Mr. Blake,

I have decided to authorize Energy West/PacifiCorp occupancy of National Forest System lands to conduct helicopter assisted coal exploration drilling on State Coal Lease ML-48258. A copy of the Decision Memo with attachments is included for your reference.

The company is authorized to proceed with drilling operations subject to the terms and conditions of the existing Special Use Permit for EM-180, EM-181, and EM-183 and is valid until July 21, 2003. Prior to commencement of drilling of EM-187 and EM-186 a new Special Use Permit is required. Energy West has been informed that they must also obtain any necessary permits from SITLA/UDOGM prior to implementation.

You should have a copy of the 2002 Special-Use Permit in your files. We will forward a copy of the 2003 Special-Use Permit for EM-186 and 187 as soon as it is issued.

Please direct any questions relating to this project to Tom Lloyd, Ferron/Price Ranger District, Manti-La Sal National Forest, 115 West Canyon Road, P.O. Box 310, Ferron Utah 84523, or call 435-384-2372.

Sincerely,

MESIA NYMAN
District Ranger

Decision Memo

PacifiCorp-Energy West Mining Company Upper Joes Valley/ Mill Fork/Crandall Canyons 2003 Helicopter Assisted Drilling Program

USDA Forest Service, Intermountain Region
Manti-La Sal National Forest
Ferron-Price Ranger District
Emery County, Utah

I. INTRODUCTION

The Forest Service has evaluated an application submitted by Energy West Mining Company (proponent), a subsidiary of PacifiCorp, for a helicopter assisted drilling program on State Coal Lease ML-48258. This project would be on lands in which the surface is administered by the USDA Forest Service, Manti-La Sal National Forest; and the subsurface coal estate by the State of Utah, School & Institutional Trust Lands Administration (SITLA). The general location is the Mill Fork, Crandall Canyon, and upper Joes Valley area about 13 miles northwest of Huntington, Utah.

The proposed project would consist of drilling 5 holes during late summer, 2003 (July 15 to September 30) (see attached map). The project would be done using helicopter assistance resulting in very little (<100 sq ft/site) surface disturbance with no road construction proposed. Three (3) of the proposed holes were permitted for the 2002 season but were not completed due to drilling conditions and the drought situation (EM-180, EM-181, and EM-183). Two additional holes are being proposed in the Crandall Canyon area (EM-186 and EM-187). Below is a tabulation of drill hole numbers, location, elevation, depth, and permit status.

Table:

Hole Number	Location	Elevation (Ft)	Depth (Ft)	Status
EM-180	1500' North, 1450' East, SW Corner Section 7, T16S, R7E, Mill Fork Canyon	9240	1330	2002 SUP
EM-181	100' North, 1100' East, SW Corner Section 12, T16S, R6E, Mill Fork Canyon	9320	1375	2002 SUP
EM-183	200' South, 300' West, NE Corner Section 15, T16S, R.6E, Upper Joe's Valley	9060	1140	2002 SUP
EM-186	1092' South, 1045' East, NE Corner Section 7, T.16S., R.7E, Crandall Canyon	9225	1330	New 2003 Proposed Location

EM-187	490'North, 885' East, SW Corner Section 6 T16S.,R.7E., Crandall Canyon	8568	710	New 2003 Proposed Location
--------	--	------	-----	----------------------------------

The purpose of the drilling would be to provide information necessary to evaluate the coal seam thickness, coal quality, and further characterize the geology of the area's coal reserves. These data are needed for mine plan development. The drilling technique would consist of helicopter-assisted wireline coring from the surface to total depth (TD) about 10 to 20 feet below the Hiawatha seam. Cores samples would be obtained from the two potential mineable seams, the Blind Canyon and the Hiawatha seam.

Below is a basic outline of the proposed helicopter assisted drilling project and needed support

- The drill rig(s), and equipment, and supplies would be transported by truck to staging areas in Mill Fork Canyon and upper Joe's Valley on existing Forest Service roads. From there it would be flown to each respective site. Equipment would include a diesel powered water pump, baskets of drill rod, water tanks and other miscellaneous items including fire suppression equipment. Road Use Permits would be obtained prior to commencement of drilling operations.
- Site preparation would include minor digging with hand tools to achieve a level area for drill platform placement. Brattice cloth (a sheet of rugged impermeable yellow material) would be temporarily placed on ground at each site prior to equipment placement to protect soils from potential contamination.
- Drill rig(s) and support equipment would be flown from the staging area to each site via helicopter.
- Needed water would be pumped from the approved water source to each drill site through a 1" yellow hose placed temporarily on the ground. The hose is flown into place by helicopter in lengths of 200 feet and is manually connected. For water rights, PacifiCorp has requested that a Temporary Exchange approved for drilling in 2002 be extended through the 2003 field season.
- Water and drilling fluid would be captured into portable tubs and re-circulated to eliminate soil and stream contamination.
- Drill cuttings would be collected and removed off FS Lands to an approved waste rock site.
- When drilling is complete and the necessary down hole geophysical data are acquired, holes would be plugged with cement slurry and bentonite per BLM and USFS approved drill hole plugging and abandoning procedures.
- Drilling and other support equipment would be removed via helicopter from the drill sites. Minor reclamation and scarification would be done with hand tools.
- Disturbed areas would be reseeded with approved USFS recommended seed mixture. Any contaminated soil would be removed and taken to an approved waste site of Forest Lands.

PacifiCorp/Energy West would request a one year extension of the 2002 Road Use Permit for the following roads: (1.) Mill Fork Canyon, FS Road 50245; (2.) Cottonwood Creek, FS Road 50040; (3.) Indian Creek, FS Road #50017; (4.) Crandall Canyon Road, FS Road #50248.

PacifiCorp/Energy West proposes to schedule drilling activities to reduce potential raptor impacts and adhere to the special raptor monitoring protocols established during the 2002 season.

After a review of the project by Forest Service wildlife specialist it was suggested that EM-181 and EM-183 be relocated away from potentially suitable habitat for Canada lynx. The proponent proposed relocating the locations about 200 yards north away from the potential lynx habitat.

In addition, the proponent requested the drilling schedule be modified an earlier date to allow access when water would likely to be more abundant (EM-180 and EM-186) and likely be absent later in the summer due to the continuing drought. Drilling activities would not take place until after the completion of the annual raptor survey or after consultation and verification with the Division of Wildlife Resources.

DECISION TO BE MADE

SITLA, the coal estate owner, has an outstanding right to occupy National Forest System lands for the purpose of exploring for and developing their coal estate. Therefore, authorization of surface occupancy is non-discretionary under Federal Regulations 36 CFR 251. However, the District Ranger can require mitigations to minimize the effects to other resources in the area.

The District Ranger Ferron/Price District, Manti-La Sal National Forest, must decide what terms and/or conditions need to be incorporated into a Forest Service Special-Use Permits authorizing the occupancy of National Forest System lands for the protection of non-coal resources.

FOREST PLAN

The Forest Plan identifies the project area as being managed for production of forage and cover for domestic livestock and wildlife (RNG Management Area). Mineral activities are permitted as long as appropriate mitigation measures are applied to assure continued livestock access and use. The project lies within the East Mountain Inventoried Roadless Area or RARE II (Roadless Area Review and Evaluation) Area. The roadless character was evaluated in the Forest Plan. The recreational opportunity spectrum was designated as "Semi-Primitive Motorized to Roaded Natural Appearing", and the visual quality objective is "Modification" and "Partial Retention". All work is helicopter assisted, therefore; will not affect the roadless character and is consistent with Forest Plan direction.

II. DECISION

I have decided to authorize occupancy of National Forest System lands to conduct the proposed 5 hole helicopter assisted coal drilling project on State Coal Lease ML-48258 by issuing Special-Use and Road Use Permits to EnergyWest Mining (PacifiCorp) subject to terms and conditions of the permits and provisions of the drilling plan as altered by the attached stipulations (Attachment 2). The Forest Plan, as amended, and Final Environmental Impact Statement are programmatic documents that considered coal development activities in conjunction with other activities on the Manti-La Sal National Forest. The proposal is consistent with all Forest Plan requirements.

I recognize that the proposed drilling activities are within the East Mountain Inventoried Roadless Area. I have found that the project will not effect the roadless characteristics; there is no road construction proposed. In addition, with helicopter assisted drilling, surface disturbance is very minor and there are no long-term effects to the surface resources. There will be no affect on soil water and air, public drinking water, dversity of plant and animal communities, habitat for T&E species, natural appearing landscape, cultural recources or other unique characteristics of the area. Therefore, extraordinary circumstances do not exist.

It is my determination that this decision may be categorically excluded from preparation of an Environmental Assessment (EA) or Environmental Impact Statement (EIS) under Forest Service Handbook 1909.15, Chapter 30, Section 31.2(3) "Approval, modification, or continuation of minor special use of National Forest System lands that require less than five contiguous acres of land." This category was determined appropriate because the area affected by this decision is short term with little disturbance. The total area of new disturbance would

be less than 1 acre. There will be negligible impacts to surface resources, and surface uses would remain essentially the same.

My decision will be implemented via transmittal of this Decision Memo and by a consent letter to UDOGM (Utah Division of Oil, Gas, and Mining). A Special Use Permit and Road Use Permit, with terms and conditions needed to protect non-mineral resources, will be issued to authorize access to and surface occupancy of the Utah State Coal Lease ML-48258.

III. DECISION RATIONALE

This decision was made after careful consideration of the proposal, public involvement, and the entirety of the supporting record. No one fact or single piece of information led to the decisions. Rather, a combination of factors contributed to it. The key considerations are discussed in the following sub-parts.

Attainment of Agency Goals:

The general purpose and need for this project is to accomplish the following goal of the Forest Plan: "Provide appropriate opportunities for and manage activities related to locating, leasing, development, and production of mineral and energy resources," (Forest Plan, p. III-4). Another related goal of the Forest Plan is: "Manage geologic resources, common variety minerals, ground water, and underground spaces (surficial deposits, bedrocks, structures, and processes) to meet resource needs and minimize adverse effects."

The effects of coal leasing, reasonably foreseeable coal development activities, and other past, present, and reasonably foreseeable actions were disclosed in the Mill Fork Federal Coal Lease Tract UTU-71307, Environmental Assessment, Lease-by-Application No. 11, 1997. The proposed exploration project is consistent with this analysis

The project-specific purpose and need of the proposed action is to authorize occupancy and use by the lessee to exercise their right to explore their existing lease(s) by evaluating the geologic stratigraphy and structure and validating the geologic potential of the area. Additionally, it is necessary to determine what mitigations are needed to assure consistency with the BLM and Forest Service policies, applicable laws, and regulations, and the Land and Resource Management Plan, Manti-La Sal National Forest, 1986.

The decision wholly meets the project's purpose and need.

Absence of Extraordinary Circumstances:

Existing resource conditions and potential extraordinary circumstances have been considered in making the decisions:

Steep slopes or highly erosive slope- The proposed drilling areas are located away from steep slopes and highly erosive slopes.

Threatened and endangered species or their critical habitat- A Biological Assessment and Biological Evaluation (BA/BE) was prepared and signed on May 13, 2003 and is available from the Forest Service project file. It was determined that the project will have no effect on T&E wildlife species or habitat. The BE identified four sensitive species - northern goshawk, spotted bat, flammulated owl, and northern three-toed woodpeckers - as "May impact individuals or habitat, but will not likely contribute to a trend towards federal listing or loss of viability to the population or species." EM 181 and EM-183 were relocated 200 yards away from what could be considered suitable habitat for the Canadian lynx.

Management Indicator Species- MIS have been considered as part of this decision. The timing of the project is during elk calving and deer fawning season. It was determined that impacts to animals would be minimal due to the lack of snow pack and the ability of deer and elk to freely move to other locations; in addition, habitat will not be permanently altered. It was also stipulated (attachment 2 Stipulations, item 20) flight paths will be strictly adhered to and only necessary flights will be made. It was determined by Utah Department of Wildlife Resources the project activities would not alter habitat of the blue grouse and there will be no direct impacts to the habitat. On May 23, 2003 UDWR monitored for 3 nest golden eagle sites within the project area. It was determined all three nests were inactive. Although there is an intermittent stream in the proposed project area, and a perennial stream near the project area those drainages would not be adversely impacted by drilling activities. Therefore, there is not likely to be any direct or indirect impacts on aquatic macroinvertebrates.

Floodplains, wetlands, or municipal watersheds- Very little earth disturbance will occur for each drill site. There are no floodplains or wetlands in the area and there will be no effect on any floodplains or wetland further down in the drainage.

Congressionally designated areas, such as wilderness, wilderness study areas, or National Recreation Areas- There are no wilderness, wilderness study areas, or National Recreation Areas in or around the project area. The nearest wilderness area is the Nebo Wilderness located on the Uinta National Forest approximately 50 miles to the northwest.

Inventoried roadless area- The project area is within the East Mountain Inventoried Roadless Area. Project activities will have no effect to the roadless characteristics since no road construction or road access into the roadless area is required. Other roadless characteristics considered and determine to have no affect include 1.) High quality or undisturbed soil, water and air; 2.) Sources of public drinking water, 3.) Diversity of plant and animal communities; habitat for threatened, endangered, proposed, candidate, and sensitive species and for those species dependent on large, undisturbed areas of land; 5.) Primitive, semi-primitive non-motorized an semi-primitive motorized classes of dispersed recreation; 6.) Reference landscapes; 7.) Natural appearing landscapes with high scenic quality; 8.) Traditional cultural properties and sacred sites; and other locally identified unique characteristics. SITLA and the permittee have an outstanding right to conduct reasonable exploration drilling in the State coal lease.

Research Natural Area- The project area is not located within any Research Natural Areas (RNAs). The nearest RNAs are Nelson Mountain, west of Ferron, Utah, and Elk Knoll in Manti Canyon. The Mont Lewis Botanical Area is located approximately 18 miles to the north of the project area.

Native American religious or cultural sites, archeological sites, or historic properties or areas- In accordance with Section 106 of the National Historic Preservation Act an archaeological inventory of the proposed project area was conducted by John Senulis of Senco-Phenix Archaeological Consultants and Energy West. No cultural resources were found. Based on the findings of the cultural resource inventory, the minimal surface impact of the project and subsequent consultation with the Utah State Historic Preservation Officer, it has been determined that there will be no effect on cultural resources as a result of the proposed project. Consultation with Native American groups has disclosed no religious or Traditional Cultural Properties.

IV. PUBLIC INVOLVEMENT

Public scoping consisted of sending 31 letters to interested parties by mail along with public notices published in Emery County Progress and the Sun Advocate. This is a partial list of the individuals, groups, and agencies contacted: Emery County Public Lands Advisory Board; Utah Environmental Congress; Utah Dept. of Wildlife Resources; Huntington-Cleveland Irrigation Company; John Blake, State Institutional Trust Lands Administration; John Larsen, Crandall Ridge Sheep Allotment; Jack Stoyanoff, North Emery Water Users Association; and the Ute and Paiute Tribes.

Public Response:

Public comments were sought by letter (March 5, 2003) and by legal notices in the Emery County Progress (March 11, 2003) and the Sun Advocate Newspaper (March 11 and 13, 2003). All comments were considered throughout the planning process for this project.

After hearing a description of the project activities, comments were received from the interest groups:

1. The Utah Environmental Congress (UEC) responded with their letter dated March 19, 2003 and expressed a number of concerns which have been addressed in the Forest Service response (attachment #3).
2. North Emery Water User Association commented they were concerned about potential impact to their spring. After detailed review the proposal, they responded back saying they were satisfied there would be no problem with the proposed drilling.
3. Utah Department of Wildlife Resources was concerned about potential conflicts with a special trophy bull elk hunt scheduled from September 13th thru September 23rd. It was determined the activities would be completed prior to the special hunt (attachment 2, Stipulation, item #3).
4. US Department of Interior, Fish and Wildlife Service reported several concerns and recommendations.
 - a. Disruption of raptors during breeding and nesting seasons
 - b. Assess potential impacts to sage grouse, and elk habitat
 - c. Provided an updated list of threatened (T) and endangered (E) species to include the bald eagle.
 - d. Consider the locale and affect of habitat of Canada lynx and other T & E species. These items have been addressed in the BE/BA and Forest Service drilling stipulations (attachment #2).

V. FINDINGS REQUIRED BY OTHER LAWS AND REGULATIONS

To the best of my knowledge, the decision complies with all applicable laws and regulations. The associations of the decision to some pertinent legal requirements are summarized below:

National Forest Management Act of 1976: The Forest Plan was approved November 5, 1986, as required by this Act. This long-range land and resource management plan provides guidance for all resource management activities in the Forest. The National Forest Management Act requires all projects and activities to be consistent with the Forest Plan. The Forest Plan has been reviewed in consideration of this project. The decision will be consistent with the Forest Plan.

Federal Land Planning and Management Act of 1976: The decision is consistent with FLPMA and Forest Service Regulations contained in 36 CFR 250. Operations will not involve disposal of waste materials or unacceptable risks to public safety or forest resources.

National Historic Preservation Act: The proposal would not result in any impacts to cultural or historic resources. (Project file)

Endangered Species Act: The Biological Assessment/Biological Evaluation has disclosed that this project will not effect on threatened, endangered plant, fish or wildlife species. It was also determined there will be no impact on sensitive plant fish and amphibian species. In addition, it has been determined there will be no impact on sensitive species of spotted bat, Townsend's big-eared bat, and the peregrine falcon. It was determined the project may impact individuals, but not likely contribute to a trend toward Federal listing or cause a loss of viability to the flammulated owl, northern goshawk and the three toed woodpecker.

National Environmental Policy Act: The entirety of documentation for this project supports that the project analysis complies with this Act.

Environmental Justice: Based on experience with similar projects on the Ferron-Price Ranger District, it is believed that this project would not have any disparate impacts on individual groups of peoples or communities. Implementation of this project will produce no adverse effects on minorities, low-income individuals, Native Americans or women. No civil liberties will be affected.

Transportation (Roads Analysis FSM 7712)

A separate project-specific roads analysis was not prepared for the following reasons:

- No new roads are needed for this project. Drill sites will be accessed by helicopter.
- Forest Service classified roads will be used for access to helicopter staging areas, however no road improvements will be necessary.
- Classified roads serving the project area were assessed in the Forest Scale Roads Analysis, which calls for retention of the roads proposed for use to support this project.

VI. IMPLEMENTATION DATE AND APPEAL OPPORTUNITY

Implementation of the decision may occur immediately upon my signature of this document and issuance of the required permits.

This decision is not subject to appeal pursuant to 36 CFR 215.

This decision is subject to appeal pursuant to 36 CFR 251.82. Notice of appeal must be postmarked or received by the Appeal Reviewing Officer within 45 days of the date of this decision. A notice of appeal, including the reasons for appeal, must be filed with the Regional Forester, Intermountain Region, Federal Building, 324 25th Street, Ogden, Utah 84401. A copy of the notices must be filed simultaneously with the Forest Supervisor, Manti-La Sal National Forest, 599 West Price River Drive, Price, Utah 84501. Appeals must meet the content requirements of 36 CFR 251.90.

VII. CONTACT PERSON

For additional information concerning the Forest Service decision, please contact Tom Lloyd at the USDA Forest Service, Manti-La Sal National Forest (address: 115 West Canyon Road, P.O. Box 310, Ferron, Utah 84523; telephone: (435-384-2372).

STIPULATIONS

**PacifiCorp-Energy West Exploration 2003
Special Use Permit for Helicopter Assisted Drill Hole on State of Utah
Lease # ML-48258 (Mill Fork Tract)**

1. A pre-work meeting including the responsible company representative(s), contractors, and the Forest Service must be conducted at the project location prior to commencement of operations. Site-specific Forest Service requirements will be discussed at this time.
2. A Road Use Permit must be obtained from the Forest Service before equipment is transported onto National Forest System lands.
3. Operations will be allowed after annual raptor surveys are conducted by DWR and concurrence to process with operations are granted from May 30 to August 31, 2003.
4. All surface disturbing activities including reclamation must be supervised by a responsible representative of the permittee/licensee who is aware of the terms and conditions of the projects permits/licenses. A copy of the appropriate permits/licenses must be available for review at the project site and presented upon demand to any Forest Service Official.
5. The Forest must be notified 48 hours in advance that heavy equipment will be moved onto National Forest System lands and that surface disturbing activities will commence.
6. Establishment of campsites and staging areas on National Forest System lands in support of this project is subject to Forest Service approval.
7. The Forest Service must be notified of any proposed alterations to the plan of operations. Any changes to the existing plan are subject to Forest Service review and approval.
8. Fire suppression equipment must be available to all personnel working at the project site. Equipment must include at least one hand tool per crew member consisting of shovels and pulaskis and one properly rated fire extinguisher per vehicle and/or internal combustion engine.
9. All gasoline, diesel, and steam-powered equipment must be equipped with effective spark arrestors or mufflers. Spark arrestors must meet Forest Service specifications discussed in the "General Purpose and Locomotive (GP/L) Spark Arrester Guide, Volume 1, April, 1988"; and "Multi-position Small Engine (MSE) Spark Arrester Guide, April, 1989". In addition, all electrical equipment must be properly insulated to prevent sparks.

10. The permittee/licensee will be held responsible for damage and suppression costs for fires started as a result of operations. Fires must be reported to the Forest Service as soon as possible.
11. Operations are subject to Forest Service fire restrictions and the Forest Service reserves the right to suspend operations during periods of high fire potential.
12. Water needed in support of operations must be properly and legally obtained according to Utah State water laws. The location of diversions, if on National Forest System lands, are subject to Forest Service review and approval. The operator shall assure that continuous stream flow is maintained below take out points at each source of water to minimize impact to wildlife, and livestock.
13. Unauthorized off-road vehicular travel is prohibited.
14. Section corners or other survey markers, including claim corners, in the project area must be located and flagged for preservation prior to commencement of surface disturbing activities. The removal, displacement, or disturbance of markers must be approved by the proper authority. Replacement will be done by the proper authority at the expense of the permittee/licensee.
15. If cultural or paleontological resources are discovered during operations, all operations which may result in disturbance to the resources must cease and the Forest Service must be notified of the discovery.
16. Gates must be closed after entry unless otherwise specified.
17. The permittee/licensee will be held responsible for all damage to fences, cattleguards, resource improvements, roads, and other structures on National Forest System lands which result from their operations. The Forest Service must be notified of damages as soon as possible.
18. Operations must be coordinated with grazing permittees to prevent conflicts. Range permittees must be notified of operations at least one week prior to starting drilling operations.
19. Harrassment of wildlife and livestock is prohibited.
20. Helicopter flight lines must be adhered to and the quantities of flights must be minimized. Flights are to keep a safe (one half mile) distance from active raptor nest. Active raptor nests are to be monitored during the drilling and helicopter operations. An acceptable ground based raptor monitoring plan is required by EnergyWest/Pacificorp to the Forest Service prior to commencement of operations.
21. Equipment and materials will be transported by helicopter to each site. Personnel will access the sites by foot from existing roads or by helicopter.
22. Drill pads will be designed to prevent soil contamination by placing brattice or other similar material on the ground prior to placement of equipment. Only minor digging with hand tools is authorized for site preparation.

23. An acceptable spill containment/spill removal contingency plan must be submitted to the Forest Service Prior to commencement of operations. MSDS sheets required on site for fuel, oils, and drilling additives.
24. All drilling fluids, mud and cuttings must be contained on the project site in portable containers and removed to an approved site as part of reclamation. No fluids will be discharged or dumped into streams or onto the ground.
25. During the drilling operations all trash, garbage and other refuse must be properly contained on the project site prior to disposal at authorized sites.
26. All significant water encountered during drilling must be reported to the Forest Service, including the depth and formation at which it was encountered, and an estimate of the flow.
27. If any of the drill holes encounter artesian groundwater flow, the District Ranger must be notified prior to plugging the hole to determine whether or not the Forest Service would elect to establish a permanent water development at the site.
28. All drill holes must be plugged in accordance with Federal and State regulations.
29. The operator must remove all drilling equipment, trash, garbage, flagging, vehicles and other materials from National Forest System lands as part of reclamation. Oil and fuel contaminated materials including contaminated soils and gravel must be removed and transported to approved location.
30. Drill rigs and heavy equipment (not including water trucks) must not be transported in or out of the National Forest System lands during the opening of the general elk hunt nor during the opening weekend of the general deer hunt and during holiday weekends.
31. Drill Sites must be reclaimed upon hole completion scarification and reseeding. Exceptions require Forest Service approval.
32. Seeding will be done with the following certified seed mix:

<u>Basic Mix:</u>	<u>#seeds/sq.ft</u>	<u>PLS lbs./acre</u>
Mountain Brone (<i>Bromus carinatus</i>)	15	4.5
Slender wheatgrass (<i>Elymus trachycaulus</i>)	15	4.5
Perennial ryegrass (<i>Lolium perenne</i>)	15	0.75
Pacific aster (<i>Aster chilensis</i>)	12	0.2
<u>Total</u>	57	9.95
<u>Supplement*</u>		
Sulfur flower (<i>Eriogonum umbellatum</i>)	10	2.0
Rocky Mountain penstemon (<i>Penstemon strictus</i>)	10	0.75
<u>Total</u>	20	2.75

The certified weed-free seed mixture must be 99 percent pure live seed containing a maximum of 1% weeds none of which are noxious.

33. All disturbed drainages must be replaced to their approximate original configuration when the project area is reclaimed.
34. Reclamation efforts will be diligently pursued to insure that a minimum ground cover is established on all disturbed areas which is equal to or greater than the surrounding undisturbed areas.
35. The operator will be held responsible for control of noxious weed infestations found to be a result of this drilling operation. Vehicles and drilling equipment are to be cleaned prior to entering National Forest System lands.
36. Stipulation for Lands of the National Forest System Under Jurisdiction of the Department of Agriculture.

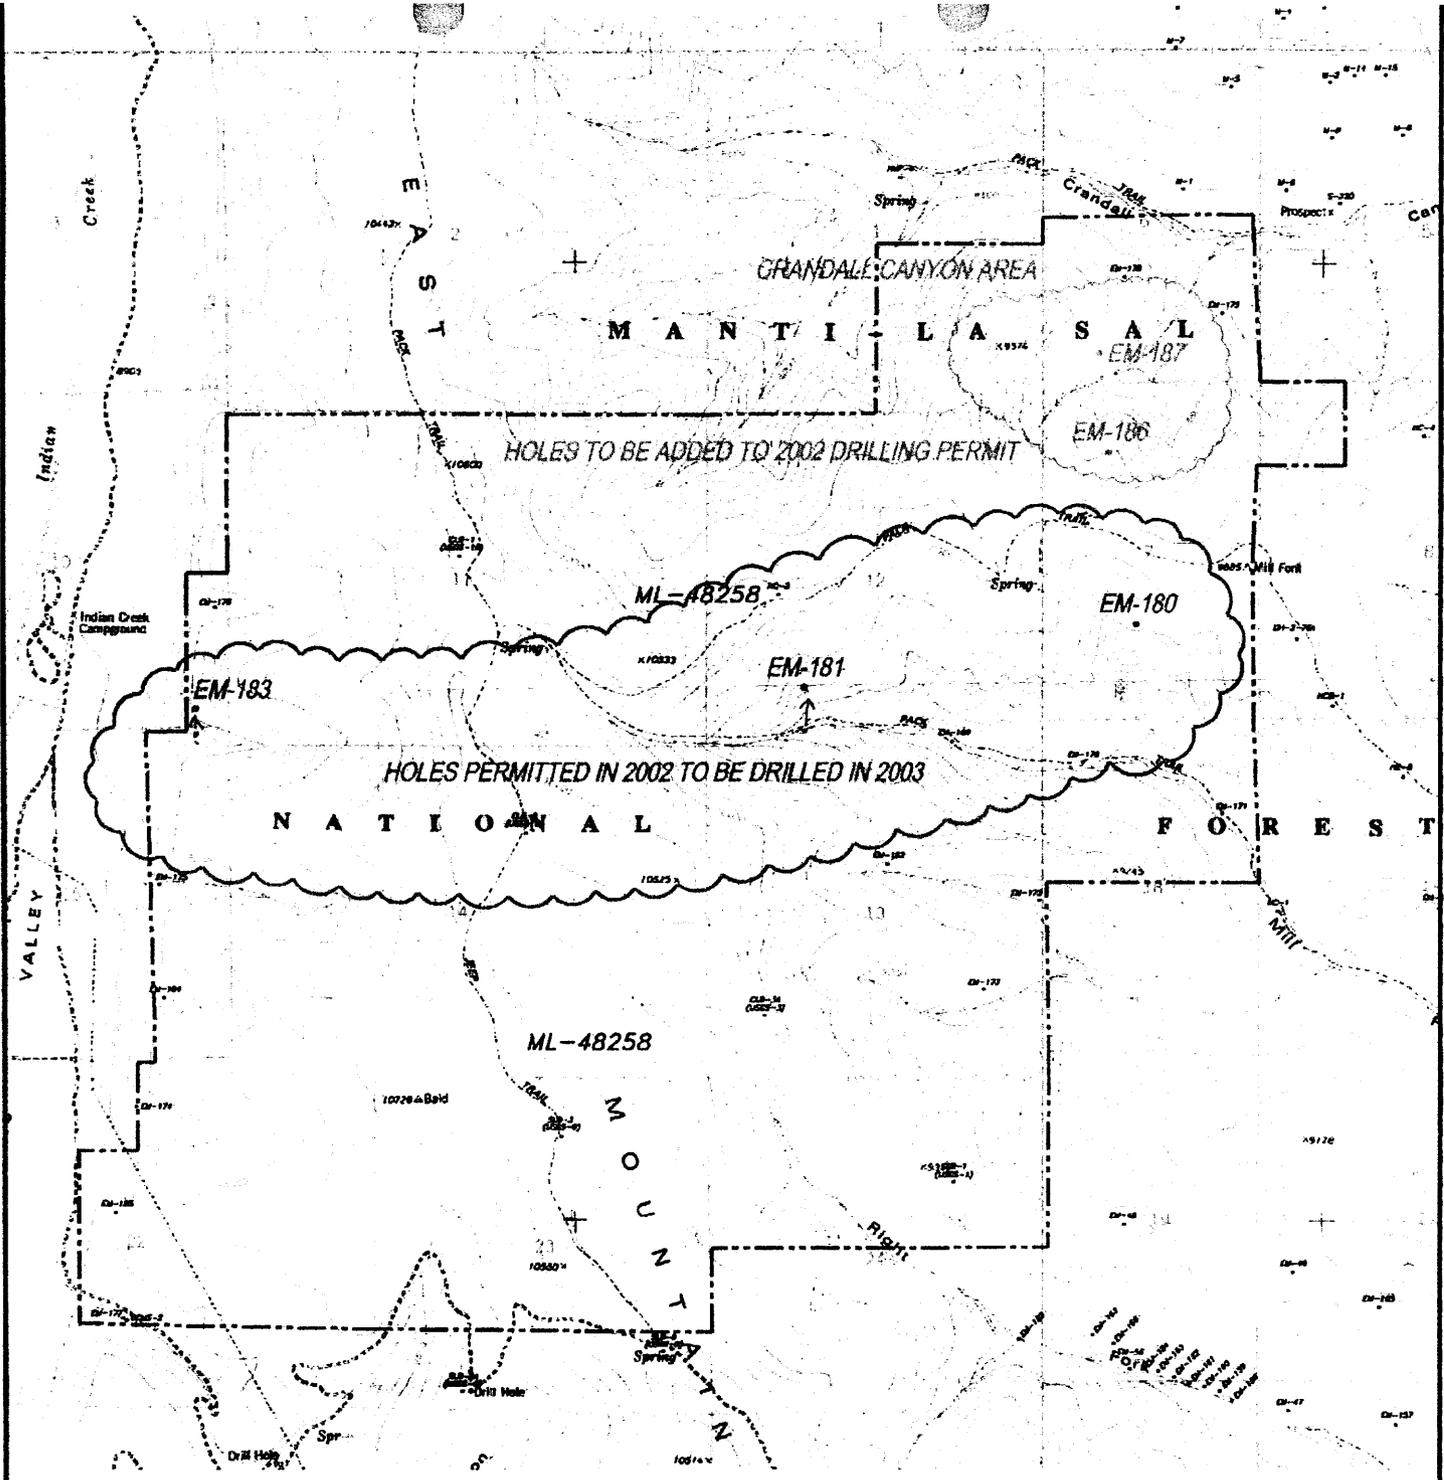

The licensee/permittee/lessee must comply with all the rules and regulations of the Secretary of Agriculture set forth at Title 36, Chapter II, of the Code of Federal Regulations governing the use and management of the National Forest System (NFS) when not inconsistent with the rights and regulations must be complied with for (1) all use and occupancy of the NFS prior to approval of a permit/operation plan by the Secretary of the Interior, (2) uses of all existing improvements, such as Forest Service Roads, within and outside the area licensed, permitted or leased by the Secretary of the Interior, and (3) use and occupancy of the NFS not authorized by a permit/operating plan approved by the Secretary of the Interior.

All matters related to this stipulation are to be addressed
